EXX Platform Roadmap
1. Project background

After Satoshi Nakamoto proposed the concept of blockchain, the globe has surged a rise of blockchain technology which centered with decentralization, the reshaping of trust mechanism and value communication. At the same time, the digital currency market, which utilized blockchain as the underlying technology, has embraced its development of spurt in the past ten years. Nowadays, the global digital currency market has owned more than 2,000 types of digital currencies and more than 10,000 transaction platforms.

As the key role in the blockchain industry, the exchanges which are connected to the primary and secondary digital currency markets, almost become the only bridge between the blockchain project and the investors. They take control of the absolute discourse power in the blockchain industry, and even grasp the lifeblood of the global blockchain business.

Unfortunately, most of the traditional exchanges have the feature of highly centralization, which is a serious violation of the core nature of blockchain decentralization. More critically, most of the exchanges, as the vested interests party, is exposed with a series of problems like opaque assets, unfair distribution of interests, week base structure, outdated safety protection, disordered listing rule and even black-box operations. In order to promote the development of the
global blockchain industry, the market urgently needs an innovative, democratic, transparent, equal, free and secure transaction environment to cope with the escalation of the blockchain industry and improve the formation of a more benign competitive environment for the global exchanges.

The history will never forget the shining moments created by the blockchain industry, as well as the hope that it brings to the global trust mechanism and the wonderful vision of redefining the world. So, with our deep understanding of the blockchain business, and the ambition of making contribution to the global blockchain industry, we, in our utmost, have created the EXX blockchain asset transaction platform.

2. Brand interpretation of EXX

EXX indicates the abbreviation of EXCHANGE X. In English, exchange means the place where people trade and do business with each other. As for X, we could think of the unknown and unsure area. But in the blockchain field and all the new industries, the letter X is mostly a symbol of imagination, possibility, hope, and the future with reinventing brilliance, which is also highly compatible with the mission of the blockchain. As with all the great achievement, it begins with imagination. The letter X also indicates that everything can be exchanged in EXX.
3. World’s first autonomous DApps digital asset transaction platform

EXX is an innovative blockchain asset transaction platform that provides secure, transparent, stable and efficient blockchain asset transaction services for the global users. It is committed to building the autonomous DApps digital asset transaction platform, also known as the first station of the blockchain asset transaction in the globe.

Based on the blockchain technology, EXX promotes the technological evolution, ecological evolution and service evolution of the digital asset transaction platform through the construction of a distributed autonomous transaction platform. At the same time, EXX initiated a subversive operation philosophy of “profit sharing”, “platform sharing” and “community-governance sharing” with global blockchain value enthusiasts. In the other hand, EXX advocates “all-round transparency of assets, high-yield dividends of token holding” and develops the innovative mechanisms such as “transaction is mining, token holding is dividend”, which will accelerate the upgrading steps of the entire digital currency market.

In EXX, all of the users can get the corresponding profit distribution and have a fee refund in the form of EXX token through the process of transaction-mining. What’s more, EXX users have the decision-making power over the major affairs
as the EXX team does. The giving out of rights to the users will achieve the effect of community governance.

This innovative system that maximizes users’ value represents the most advanced form of exchanges that can be foreseen at the moment, and is the most disruptive application on blockchain.

4. Features of EXX platform

EXX’s mission is to create a fair and ideal environment for investors’ investment, transaction and digital asset management. As a result, the aim of designing this platform is to fully guarantee the fairness and transparency of the orders, and to meet the regulatory requirement of security, auditing, reporting, and analysis in the safest and most effective way.

4.1 High ranking in the world, daily transaction up to billions

The EXX digital asset transaction platform takes up a high ranking in the world. Its transaction system can reach a rapid and stable financial level, bringing efficiency and security to the transaction. With reference to the security-level algorithm, it can support GTT\GTC\FOK\IOC and other professional transaction instructions to build the underlying technology platform, and can provide
professional quantified support for users, with daily transaction up to billions.

4.2 Safeguard for your asset, multiple technology to ensure the transaction security

Security is the key to digital asset transaction. To ensure users’ asset security, EXX adopts a series of techniques including mobile verification, real-name authentication, two-factor Google authentication, offline BTC wallet, synchronized backup and SLB balancing in server.

4.3 High-performance matching engine, outstanding advantages in service

EXX utilizes advanced distributed group structure, micro-service development, and independently-invented matching transaction engine. With a distributed structure, each transaction pair can be deployed on different servers to match, thus achieving the ability to develop linearly. With a processing speed of 5 million transactions per second, the matching operation not only has a fast matching speed, but also keeps the server at a stable status.

EXX also provides the customer service in 24/7, responding the tickets request promptly.
4.4 Strong ability and rich operation experience in the team

The core team of EXX is composed of senior experts in the global blockchain asset transaction industry and top tier elites in the field of financial technology. The team has years of experience in digital asset operation.

4.5 Diverse tokens with smart selection

EXX applies a new type of smart transaction system to achieve entirely automatic token listing, smart auditing, smart contract auditing and mega data risk control. The listing of tokens is decided and voted by all the ET community users through the smart contract. The voting data is recorded on the blockchain so that it is irreversible. The data therefore is open and transparent, improving the credibility of the voting results which will not be modified even if the system is hacked.

The EXX transaction platform provides diversified currency transaction, and comprehensively evaluates and selects the currency based on some factors such as transaction volume, transaction time, growth index and ET community contribution, in order to reduce the investment risk and loss caused by the malicious orders with worthless token and fraudulent token.
4.6 Complete autonomy of the community, full transparency on the information

ET community operation is completely autonomous for the community members. Major issues such as community election supervision, voting right in the token listing and node elections are all decided and voted by the community members.

Gradually EXX will be more and more open to the community through the smart contract, in which all the information will be open and transparent and accepts the supervision of the community.

5. EXX Platform planning

5.1 EXX Product planning

5.1.1 Creating a perfect fiat money system

At present, EXX has supported the RMB fiat money channel; EXX plans to gradually establish the US, Euro, Pound Sterling, Thai Baht, Japanese, Korean, Hong Kong fiat money channel in the later period.
5.1.2 Establishment of a Multi-dimensional passageway for fiat money

At present, EXX has formed OTC+C2C fiat money system. In the future, EXX will establish OTC+C2C+bank recharge and other omni-directional and three-dimensional fiat money system.

5.1.3 Support for more mainstream language countries

At present, EXX PC interface language supports simplified Chinese, traditional Chinese, English, Korean and Japanese; mobile terminal supports Chinese and English; future EXX terminals will support the whole language interface system, the system will automatically match the interface language according to the user's region.

5.1.4 Establishment of multi-terminal application system

At present, EXX has supported PC/Android/IOS three major terminals; in the future, it will support PC/Android/IOS/PC desktop application+Linux and other terminal systems.
5.1.5 Providing Futures Contract Function

EXX plans to further improve the trading system, increase leverage, futures contracts and other trading functions.

5.1.6 Upper Line Block Chain Online Mall

EXX will integrate virtual economy / entity / integrated block chain ecology, relying on the block chain online mall system of exchange ecology.

5.1.7 Upgraded to the world's top matching engine

In the future, EXX will upgrade its trading matching engine, which will reach the top level in the world.

5.1.8 Establishing a Whole Currency Wallet System

At present, EXX has established a wallet system of hundreds of mainstream currencies plus innovative currencies based on five years' experience in the operation of exchanges. In the future, EXX will discover high-quality currencies in time and establish the best and most comprehensive wallet system in the market.

Increase the service of deposit, interest and loan.
5.1.9 Digital currency deposit, interest and loan services

EXX will gradually integrate into the core business of traditional finance and Internet, and realize diversified financial and blockchain technology service system.

5.2 EXX Operation planning

5.2.1 Perfecting 100,000 Exchange Union

At present, EXX has initially built a prototype of 100,000 exchange alliances. In the future, EXX will rely on the trading advantages of 100,000 exchange alliances to further establish a huge trading system.

5.2.2 Establishing Interactive Community of Block Chain Market

In the future, EXX will establish community / online forum / offline summit / Exchange Club and other interactive communities to provide users with the industry’s top information exchange services.

5.2.3 Establishment of ET-based STO Exchange

EXX will be based on EXX Token (ET) accounting unit, and regularly share operation, decision-making and revenue to all members who join EXX.
5.3. EXX Market layout

5.3.1 Establishment of a global network operation system

At present, EXX has established four major operating centers in Australia, Korea, Hong Kong, China and Mainland China, and nine major operating nodes around it, including Japan, Thailand, Dubai, Malaysia, Switzerland, Malta and other countries. In the future, EXX will have 20 major operating centers worldwide.

5.3.2 Establishing professional business alliances

EXX will establish a strategic alliance system with the enterprises of node, media, community, high-quality project, wallet and investment institution.

5.3.3 Top Capital Alliance Established

EXX plans to cooperate with at least five top investment institutions in traditional industries in the future.

5. ET (EXX Token)

6.1 ET introduce

6.1.1 The summary of ET

EXX Token, abbreviated as ET, is the proof of stake of the EXX transaction platform itself, and is the only global certificate.
On July 9, 2018, ET was officially issued to the outside world, with a total amount of 10 billion. The total ET issuance is constant at 10 billion and will never be increased. In addition, ET holders share various rights in the community such as community governance.

**6.1.2 The right of ET**

As the proof of stake of circulated encrypted digital asset, ET will become an essential element in the future digital economy era. Being the representative of EXX community right, ET is the cornerstone of the collaborative development of EXX community members.

**6.2 Rights interpretation**

**6.2.1 Participation in decision making**

The EXX community allows the ET holders to participate in decision making over the major affairs by initiating the smart contract voting.

**6.2.2 Election and supervision**

Members of the EXX community committee are regularly renewed. And the ET holders can participate in the election of committee, as well as monitor the transparency of the platform and the diligence of committee members.
6.3 ET Release Rules

6.3.1 ET 1.0

On July 28, 2018, EXX adopt the mode of "transaction is mining", in which users can get the ET output when making transactions with specified tokens. Being in the form of ET, the issuance part is released in the proportion to ET and all the circulative ET possesses the profit distribution. EXX Digital Asset Trading Platform will regularly distribute 80% of its revenue to the circulative ET holders.

1) Distribution mechanism

The proportions of each part are as follows: 45% of ET acts as the reward for the community users through the mode of "transaction is mining"; 44% of the ET is issued to the participants through membership selling; 6% is used for the EXX Fund (fund shares); 5% is held by the operation team.

2) Release Rules

Generally speaking, user participation determines the release rate of all locked ET. 45% of the ET is refunded step by step to the users in "transaction is mining". Once the 45% are entirely returned, "mining" is automatically terminated.

6.3.2 ET 2.0
1) Release mechanism

Starting from 10 o’clock June 1, 2019 (GMT+8, the same below), ET will be upgraded to a new release mode. Users originally locked ET releases 0.3% per day, and the release is completed in 333 days. The released ET will reach the user account at 10:00 per day and become a circulating ET (Note: Users will receive the first release ET at 10:00 on June 2, 2019).

2) Donation activities of Locked ET

In addition, in order to give back to ET holders, we launched the first phase of the benefits activities to locked ET voluntarily. Specific rules are as follows:

1.1 ET holders can lock certain amount of circulating ET independently, and then get rich ET gifts. The gifts and benefits activities are divided into five categories. See the table below for details:

<table>
<thead>
<tr>
<th>Participating currencies</th>
<th>Moving gear</th>
<th>locked ET Quantity</th>
<th>Number of Donation ET</th>
<th>Total ET</th>
<th>Get ET/Principal ET</th>
</tr>
</thead>
<tbody>
<tr>
<td>ET</td>
<td>S1</td>
<td>2,500</td>
<td>2,500</td>
<td>5,000</td>
<td>200%</td>
</tr>
<tr>
<td>ET</td>
<td>S2</td>
<td>10,000</td>
<td>11,500</td>
<td>21,500</td>
<td>215%</td>
</tr>
<tr>
<td>ET</td>
<td>S3</td>
<td>25,000</td>
<td>32,500</td>
<td>57,500</td>
<td>230%</td>
</tr>
<tr>

<td>S4</td>
<td>50,000</td>
<td>75,000</td>
<td>125,000</td>
<td>250%</td>
</tr>
<tr>
<td>ET</td>
<td>S5</td>
<td>150,000</td>
<td>300,000</td>
<td>450,000</td>
<td>300%</td>
</tr>
</tbody>
</table>
1.2 The total number of ET that each user can participate in the first locked gift activity is 150,000 (excluding the locked part of the user during the transaction mining).

1.3 EXX platform can participate in the first phase of locked the total number of ET Donation activities is limited to 100 million.

1.4 The ET locked by users participating in the Donation feedback activities and the release rules of frozen ET given by the platform will automatically start the new release mode, 0.3% will be released every day from the date of the user's self-lock, totaling 333 days. The user will receive the first release of ET at 10:00 on the next day of locked.

7. EXX Industry Alliance Planning

7.1 National Tourist Eco-Resort

7.1.1 Overview of the project

EXX Group plans to build a national tourism eco-resort area of more than 30,000 mu in northern China in order to promote the industrial integration of block chain industry and real economy. The resort is a large-scale cultural vacation tourism complex which integrates tourism, pension, medical treatment, shopping, film and television, education.
After landing, the resort will bring stable employment and economic growth, and promote the scientific, orderly and rapid development of local tourism industry and the export of characteristic culture. The construction of characteristic tourist eco-resorts can also improve the current situation of inadequate construction of cultural holiday tourism in China.

In addition, the resort will use block chain technology to establish a decentralized tourism service system and cloud database, and gradually establish a transparent and credible tourism ecological chain. This model will greatly reduce the transaction cost of tourism, improve service efficiency, and strengthen the transparency of the industry. It can serve as a model for the transformation of traditional tourism industry.

( Live shooting of the project site )

7.2 Five-star Modern Hotel

7.2.1 Overview of the project
Building super-class modern hotels is an important strategic step for EXX Group to lay out the real industry. Through a series of cutting-edge technologies such as block chain, Internet of Things and artificial intelligence, including optimization of key chains such as hotel operation efficiency, supply chain, information processing and brand building, a more intelligent modern five-star hotel can be built. The hotel will provide top-notch leisure and entertainment services to high net worth people around the world, such as international five-star hotels such as Dubai Sailing Boat, Brunei Empire, Alaska Venetians and so on.

7.2.2 Hotel sketch

( Sketch Map )
7.3 Super Large Entity Mall

7.3.1 Overview of the project

EXX plans to build the world’s first large offline physical mall in South Korea that can be paid in digital currency. The mall will be an important strategic step for EXX Group’s online block chain payment system. The mall plans to support three payment channels, one is paper currency settlement, the other is electronic cash payment, and the third is digital currency payment.

Digital currency payment channels will support the consumption settlement of the mainstream digital currencies such as BTC, ETH, LTC and ET. Based on the different usage scenarios of users and businesses, EXX platform will also provide different client systems with different functions for users and businesses online. User edition is mainly based on digital wallet to provide users with the functions of collection, payment, transfer, C2C fiat money transaction and so on. Business edition mainly provides order management, order settlement, refund and other services for franchised merchants. The system will be applicable to various payment scenarios and can easily meet the different settlement needs of merchants.

In addition, the system will also realize online / offline e-commerce mode in the later period. Users can use digital money client to purchase goods. This mode will also help more enterprises to expand their business with high efficiency and low cost.
The successful case of EXX Mall will also boost industry confidence and play a benchmarking role for the global block chain cause.
